

MacTubes – a video download application (Reminder: YouTube is blocked at school)

1. Open YouTube. Find your video and copy the URL of the video
2. Open MacTubes. Go to the File menu – Open Video
3. Paste in the url and click OK

3. The video window will open and the video will be ready to play. You can either watch it OR download the video for future viewing.

4. To Download: Click the daisy icon to select Download and choose the video file format (MP4 for Quicktime or FLV for Perian).

The downloaded video will show up on your desktop. You can change the location of the download by opening Preferences – General tab in MacTubes.

When you quit MacTubes, you will clear out all of your videos from that session.
